**in the U.S. and
Canada**

The only multi-pleated filter element specifically designed for the Wheelabrator family of pulse jet collectors

Features

- *High collection efficiency*
- *Spun bonded polyester filter media*
- *Proprietary retainer ring*
- *Easy installation and removal*
- *Integral venturi and support cage*
- *Up to 35% more volume*
- *More than 4 times the surface filtration area*
- *200°F/93°C operating temperature*
- *Low maintenance*
- *Washable in some applications*

The *JET Pleat* multi-pleated filter element, designed for our new *JET 2000* Dust Collector, can also enhance the performance of existing Wheelabrator pulse jet dust collectors.

The multi-pleated filter element allows greater gas flow and has more than 4 times the surface filtration area of standard bags, based on the same length. It can handle up to 35% more volume on some applications. The shallow pleat permits more effective cleaning than deep pleated filters.

The *JET Pleat* installs easily into the Wheelabrator tube-sheet, using a proprietary retainer ring. There is no need for separate cages or venturis.

In some applications, it is washable and, therefore, reusable, lowering your maintenance costs while improving the performance of your collector.
